

## It's Getting Easier to be Green...

The world is getting 'greener' everyday. And **Green Star Group** makes going Green easier. More and more smart, eco-conscious consumers are switching to green alternatives for everyday household needs.

People are becoming acutely aware of the food they put in their mouths, the automobile emissions they release into the atmosphere and the chemicals they allow into their homes.

**Green Star Group** makes it easier to be Green. Our company was founded in order to create bio-sensitive, effective alternatives for petrochemical-laden everyday household products. We are proud to be the home of Uncle Albert's Super Smart Ant Bait. This natural, certified organic ant bait meets all of the rigorous, environmentally sensitive criteria required to be part of our product family. Consumers now have the option of controlling ant infestations with a natural, organic product rather than exposing their family to harsh petrochemical pesticides.

Don't let "natural" fool you. This is a product that works! Uncle Albert's is made with boron compounds, a naturally occurring element of the earth which is deadly to ants, but practically harmless to humans and pets. Boron compounds include familiar products such as boric acid eye wash and washing powders for clothes.

*"If you're looking for natural ant bait, try Uncle Albert's. It's the natural pest control you didn't know you've always wanted! Compare it to any other ant bait you might read about and you'll find this is the formula for you."*

- Leslea M. Harmon

# ANT BAIT

The **NATURAL**  
solution to your ant problem  
is an **UNCLE...**

## How Effective Could Organic Ant Bait Really Be?

You might be skeptical about natural, all “green” organic ant bait. After all, if it's so safe to use then how can it possibly control your ant infestation? There's no need to declare chemical warfare on an ant colony with Uncle Albert's around.

The secret is boron and its derivatives, which isn't that big of a secret. People have been using these naturally occurring elements of the earth's surface to control pests for years because of its ant killing ability and low human toxicity. In fact, Uncle Albert's is 85 times less toxic to people and pets than regular table salt!

## How does it work?

Ants are attracted to the bait. They sample the bait (which they find very tasty), and take it back to their nest to share with the entire colony. The bait is enjoyed by the other ants in the colony, including the queen. Typically it takes several days for Uncle Albert's to be spread throughout the colony.

After ants eat the bait, the natural active ingredient interrupts their ability to digest food and it's “game over”.

Advanced formula bait attracts and kills all common household ants

## Top Ten Reasons Consumers Buy Uncle Albert's

- Effective against most common types of household ants
- Environmentally friendly
- All Natural
- Certified organic
- Scent free
- Safe to use around humans
- Long lasting formula
- Easy, mess-free application
- Trusted by pest control professionals nationwide
- Money back guarantee

## Uncle Albert Products

**Uncle Albert's Gel Bait Syringe** – No matter where ants are hiding, the tip of this bait applicator will make it easier for you to get to them. Great for getting inside of cracks and around baseboards.

**Uncle Albert's Liquid Bait** – (1 gallon, 1 Litre and 16 oz sizes available) Perfect for use in one of our Ant Café bait stations, Uncle Albert's liquid formula can tackle your ant infestation, no matter how major it is.

**Ant Café Bait Stations** – (12 and 20 packs available) Makes applying Uncle Albert's liquid bait much easier to dispense.

**AntPro Ant Control System** – This advanced dispensing system for Uncle Albert's helps destroy entire ant colonies, not just individual foraging ants. Its patented, round-the-clock, feed-on-demand liquid bait delivery capability is proven effective against most ants including carpenter ants and fire ants.
